Mission

Behavior Analysis Consultants of Mid-Florida, LLC, seeks to increase the quality of life for adults and children with emotional and behavioral disorders. This mission is accomplished through comprehensive behavior analytic consultation to increase caregiver, teacher and staff reinforcement based behavior management skills. Increased quality of life is evidenced by measurable decreases in adult and child problem behavior, successful functioning in the least restrictive environment possible, durable demonstration of appropriate behavior and productive social skills, and consistent contact with positive reinforcers in their optimal family and community settings.

About Applied Behavior Analysis

Applied Behavior Analysis (ABA) is a branch of experimental psychology, based on the scientific study of behavior that uses systematic methods of assessing and designing interventions for behavior change. It is based on the philosophy that an individual's behavior is determined (learned) by past and current environmental events; thus ABA focuses on explaining behavior in terms of external events that can be observed and manipulated. Our goal is to identify and change environmental events which serve to trigger and maintain behaviors of concern in ways empirically predicted to decrease problem behavior and increase appropriate behaviors. ABA involves directly observing behaviors, data collection and analysis, and developing interventions which increase, decrease or maintain behavior as appropriate

ABA is unique in its emphasis on the utilization of reinforcement based strategies to reduce problem behavior. It utilizes a learning based approach by increasing specific skills which work to change the social environment to decrease motivation for problem behavior and increase access to social and other reinforcers which themselves are contingent upon demonstration and maintenance of appropriate behavior.

Español

Behavior Analysis Consultants of Mid Florida es un grupo de analistas del comportamiento certificados dedicados a la mejor práctica empírica de servicios de el análisis aplicado del comportamiento y al servicio profesional al cliente. En conjunto tenemos sobre 50 años de experiencia sirviendo niños y adultos con una gran variedad de diagnósticos y problemas de conducta. También hemos trabajado con estos individuos junto y cercano a sus familias y su medio ambiente. Nuestra obra consiste en cambiar el medio ambiente del individuo especialmente los eventos que sirven para poner en operación y mantenimiento de la conducta que nos concierne por métodos empíricos y probados en la incrementación de conducta apropiada y la disminución consistente del comportamiento problemático. Nuestra especialidad incluye pero no esta limitada a el Autismo y Aspergers, problemas del desarrollo y problemas de conducta en el hogar o en la escuela.
